Field Data

Real-world measurements from Chrome users who visited these pages in the last 28 days. Only available for pages with enough Chrome traffic to build a reliable sample. How we measure

1 of 10 mobile checks pass · 3 of 10 desktop checks pass

URL	Mobile	Desktop
https://sample.perfdelta.com/	LCP: **4050 ms** INP: **300 ms** CLS: **0.18**	LCP: **2650 ms** INP: **140 ms** CLS: **0.12**

Competitor Comparison

Field data (real Chrome user measurements) for the whole domain, all devices combined, over the last 28 days. That is why these values can differ from the per-page mobile and desktop figures above. Comparing at domain level keeps the table readable with several competitors. How we measure

Domain	LCP	INP	CLS
sample.perfdelta.com Your website	5576 ms	422 ms	0.22
competitor-a.example	4700 ms **You: 876 ms slower**	390 ms **You: 32 ms slower**	0.27 **You: 0.05 more stable**
competitor-b.example	2100 ms **You: 3.5 s slower**	150 ms **You: 272 ms slower**	0.05 **You: 0.17 less stable**
competitor-c.example	3300 ms **You: 2.3 s slower**	240 ms **You: 182 ms slower**	0.12 **You: 0.10 less stable**
competitor-d.example	2600 ms **You: 3.0 s slower**	180 ms **You: 242 ms slower**	0.08 **You: 0.14 less stable**
competitor-e.example	5200 ms **You: 376 ms slower**	460 ms **You: 38 ms faster**	0.31 **You: 0.09 more stable**
competitor-f.example	1900 ms **You: 3.7 s slower**	120 ms **You: 302 ms slower**	0.02 **You: 0.20 less stable**
competitor-g.example	3800 ms **You: 1.8 s slower**	290 ms **You: 132 ms slower**	0.17 **You: 0.05 less stable**
competitor-h.example	2900 ms **You: 2.7 s slower**	210 ms **You: 212 ms slower**	0.09 **You: 0.13 less stable**
competitor-i.example	4300 ms **You: 1.3 s slower**	350 ms **You: 72 ms slower**	0.22 **Level with you**
competitor-j.example	No CrUX data (not enough Chrome traffic yet)		
PerfDelta median (4189 domains tested)	1961 ms	144 ms	0.04
WordPress median (462 sites)	1975 ms	115 ms	0.03
Online retail median (1034 domains tested)	1992 ms	185 ms	0.05

Position among 4,189 websites measured by PerfDelta (field data, all devices): **LCP better than 5% · INP better than 5% · CLS better than 12%**

Among 462 measured WordPress websites: **LCP better than 4% · INP better than 3% · CLS better than 6%**

Your values against your industry

Where this domain sits in the Online retail distribution, measured across 1034 domains. The colour of your own value still follows the Google thresholds.

Metric	Your domain	Industry median	Middle half of the industry	Position
LCP	5576 ms	1992 ms	1534 ms – 2602 ms	**Slowest quarter**
INP	422 ms	185 ms	137 ms – 253 ms	**Slowest quarter**
CLS	0.22	0.05	0.01 – 0.13	**Slowest quarter**

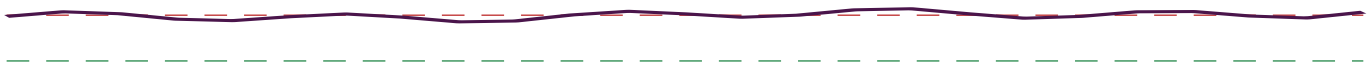
Google keeps the same pass thresholds for every site: 2500 ms LCP, 200 ms INP, 0.1 CLS. The industry values say what is common, not what is good.

CrUX Trend for this Domain

Real Chrome user data for the whole domain, all devices combined, week by week. Each point covers the 28 days up to that week, so the latest point can differ slightly from the competitor comparison. The dot colour shows how that week rates, the dashed lines mark the thresholds for good and poor. Google currently provides up to six months of history, not a limitation of this tool. How we measure

2026-02-06 – 2026-08-20

LCP **4100 ms**



INP **310 ms**

CLS **0.19**

PageSpeed Score Measurements for this Domain

Lab data: based on a single Lighthouse run per test, not real-user measurements.

Optimization Actions

Implemented since the last measurement

These actions appeared in the previous measurement and are gone now. Values: lab measurement on the pages measured both times.

- **Use the right image sizes** · Lab LCP: 4.6 s → 4.2 s
- **Minify theme and plugin CSS** · Lab LCP: 4.2 s → 4.1 s

1. Reduce unused JavaScript **est. -890 ms**

Mobile All 10 analyzed pages

Several scripts ship more code than the page actually executes, delaying interactivity on mobile.

Code-split routes and defer non-critical bundles so only the JavaScript needed for the first render loads eagerly.

Affected files

- vendor-bundle.min.js · saves up to ≈ 856 ms / 209 KB
- analytics-suite.js · saves up to ≈ 232 ms / 57 KB

2. Lazy-load offscreen images **est. -640 ms**

Mobile and Desktop /blog, /blog/core-web-vitals-guide, /blog/image-optimization-responsive-images-srcset-avif-webp-lazy-loading-guide, /features

Images below the fold load immediately, competing with the largest contentful paint image for bandwidth.

Add loading="lazy" to below-the-fold images and prioritize only the hero image.

Affected files

- post-hero-wide.jpg · saves up to ≈ 1.2 s / 305 KB

3. Serve images in modern formats **est. -720 ms**

Mobile and Desktop /, /features, /integrations, /blog, /blog/core-web-vitals-guide, /blog/image-optimization-responsive-images-srcset-avif-webp-lazy-loading-guide, /pricing

Product screenshots and marketing photos are shipped as unoptimized JPEG/PNG, far larger than a modern WebP/AVIF encode.

Re-encode images as WebP or AVIF with a JPEG/PNG fallback for older browsers.

Affected files

- hero-dashboard.png · saves up to ≈ 1.1 s / 262 KB
- pricing-comparison.png · saves up to ≈ 536 ms / 131 KB

4. Eliminate render-blocking resources **est. -410 ms**

Mobile and Desktop All 10 analyzed pages

The stylesheet and several scripts in the document head block the first paint on every page.

Inline critical CSS, defer the rest, and load non-essential scripts with the defer attribute.

Affected files

- app.css · saves up to 310 ms / ≈ 24 KB
- main.js · saves up to 100 ms / ≈ 8 KB

5. Minify JavaScript **est. -320 ms**

Mobile All 10 analyzed pages

The main application bundle and several third-party scripts ship unminified, with comments and whitespace intact.

Run a production build step (minification + tree-shaking) before deploying JavaScript bundles.

Affected files

main.js · saves up to ≈ 164 ms / 40 KB

6. Enable text compression est. -280 ms

Mobile and Desktop All 10 analyzed pages

HTML, CSS and JavaScript responses are served without gzip or Brotli compression.

Enable Brotli (or gzip as a fallback) compression for all text-based responses at the web server or CDN level.

7. Preconnect to required origins est. -150 ms

Mobile All 10 analyzed pages

Third-party origins for fonts, analytics and the live-chat widget are discovered late, adding avoidable connection latency.

Add <link rel="preconnect"> for the font, analytics and chat-widget origins used on every page.

8. Prioritize the LCP image est. -260 ms

Mobile and Desktop /, /features, /integrations, /blog/core-web-vitals-guide

The largest contentful paint element is a hero image that is not marked as a high-priority resource.

Add fetchpriority="high" and preload the hero image so it starts downloading immediately.

Affected files

- hero-dashboard.png · saves up to 260 ms

Lab Metrics

Controlled measurements from a single Lighthouse run per page. Useful for finding the cause of a slow page, but values can vary a little between runs.

Test setup: mobile emulates a mid-range phone on a throttled connection, desktop runs unemulated on a faster connection. Both run in headless Chrome.

Page Weight

Breakdown by asset type for each analyzed page (mobile). Weight can vary a lot page to page, so an average would be misleading here.

URL	Images	Scripts	Media	Stylesheets	Fonts	Document	Other	Total
